

Rooftop Units Application Data Sheet

Turntide Smart Motor System™

Sitting on the top of buildings, Rooftop Units (RTUs) work behind the scenes in buildings to maintain optimal indoor conditions – from keeping customers comfortable in a hot, humid environment, to ensuring food is stored at the right temperature for optimal freshness.

Unfortunately, HVAC systems, including RTUs, run on old, inefficient technologies. Due to their importance to everyday business operations, HVAC can contribute up to 35% of energy costs within a building – reducing profits and increasing utility bills.

Designed with a Optimal Efficiency Motor[™], the **Turntide Smart Motor System[™]** drastically reduces the energy consumption of RTUs with zero compromise to HVAC run conditions: saving energy, money, and the environment.

Immediate Energy Savings

Turntide motors save energy through patented switched reluctance design, which utilizes optimal device physics and control algorithms to run more efficiently.

Gets Better and Smarter Over Time

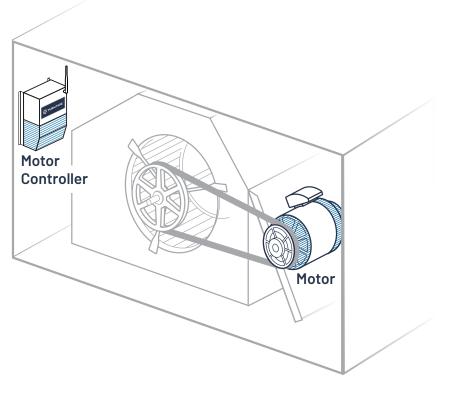

Turntide motors utilize operating conditions and runtime data to generate improved control algorithms that further optimize system efficiency.

The Turntide Smart Motor System™ for Rooftop Units

The Turntide Smart Motor System is a high-impact energy conservation measure that delivers immediate and longterm savings. By swapping out legacy AC induction motors and replacing them, Turntide reduces HVAC energy use by an average of 64%

What's in the Turntide Smart Motor System?

Smart Motor

Our patented high rotor pole switched reluctance motor with advanced device physics runs more efficiently and reliably.

Motor Controller

The controller helps the variablespeed motor work at optimized efficiency across a broad range of speeds, enables customized sequences of operation or application-specific functionality, and protect the system from damage or failure.

Turntide Technician mobile app makes evaluating, commissioning, and installing Turntide energy conservation projects easy.

Outperforms Existing HVAC Efficiency Measures

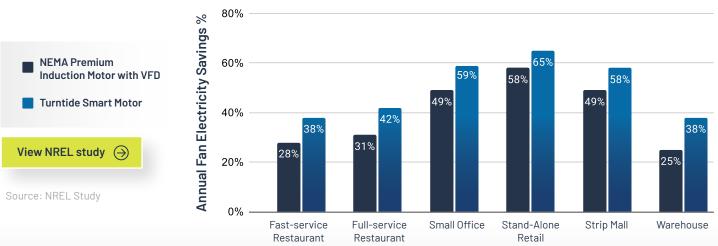

The ultimate energy conservation measure

The Smart Motor System makes HVAC equipment more efficient, more intelligent, ultra reliable, and simple.

Better performance than VFD retrofit

Annual Fan Electricity Savings from Motor Retrofit

Proven to Improve HVAC Performace in RTUs

Sustainability focused british retailer Wilko installs Turntide Smart Motor System to dramatically reduce energy bills and carbon footprint

THE RESULTS:

>40% energy reduction compared to baseline

20% additional energy savings paired with BMS system

800 Turntide Motors deployed across Wilko retail locations

Turntide Smart Motor System Specifications

Motor Compatibility

Turntide smart motors are designed with industrystandard specifications, matching nameplate specs found on an AC induction motor.

Horsepower

• 1-15 HP

- 56Y
- Voltage
- 208-230V
- 460V
- 575V

RPM Range

• 100-3600 RPM

NEMA Frame Sizes

- 56/56H
- 56Z/56HZ/143T/145T
- 182T/184T
- 213T/215T

NEMA Motor Enclosure

• TEFC

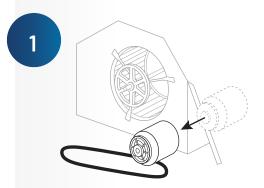

RTU Compatibility

The Turntide Smart Motor System is compatible with rooftop unit systems for most building types.

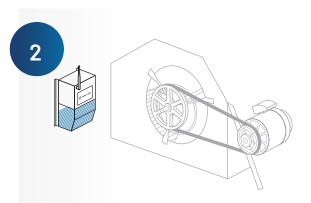

Building Types

- Shopping Malls
- Retail
- School
- Office
- Hotel
- Supermarkets
- Industrial/Warehouses
- And Many More

RTU Retrofit: 5 Easy Steps

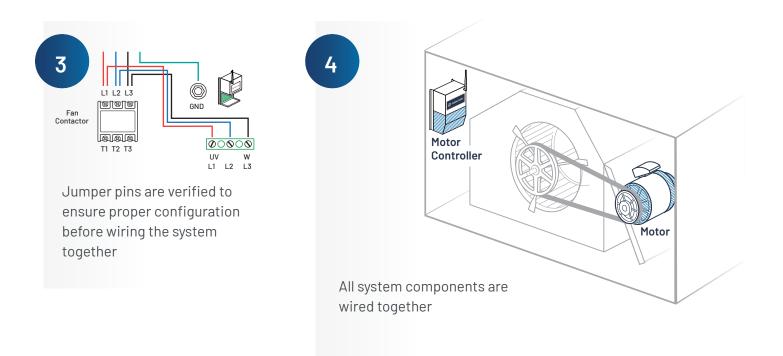

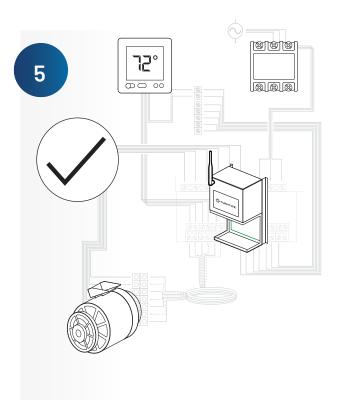

The original motor in the rooftop unit is removed, and replaced with a Turntide smart motor

The Turntide motor controller is installed to connect with the motor

System is started up to test and ensure all components work properly for 24/7 safe, reliable operation
